Backend / Full-Stack Developer Intern | Node.js · Express.js · React.js · PostgreSQL

PROFILE

BIT 8th-semester student and aspiring Backend / Full-Stack Developer with hands-on experience building and deploying full-stack web applications. Experienced in developing REST APIs, authentication systems, role-based access control, database design, responsive frontend interfaces, and cloud deployment workflows. Built and deployed SewaFi, a home-services booking and dispatch platform, and PicFlow, a cloud-based image upload feed application. Strong interest in backend architecture, database modeling, debugging, and production-ready application development.

TECHNICAL SKILLS

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Multer, Socket.IO

Frontend: React.js, JavaScript, HTML, CSS, Tailwind CSS, Responsive Design

Database: PostgreSQL, Prisma ORM, MongoDB, Mongoose, Schema Design

Tools & Platforms: Git, GitHub, Postman, VS Code, Vercel, Railway, Supabase, Figma

Currently Learning: TypeScript, Next.js, NestJS, Docker, Redis, Jest/Vitest

PROJECTS

SewaFi – Home Services Booking & Dispatch System

Live: sewafi.vercel.app | GitHub: github.com/whyshisir02/sewafi

Tech Stack: React, Node.js, Express.js, PostgreSQL, Prisma, Socket.IO, JWT, Railway, Vercel, Supabase

- Built and deployed a full-stack home-services platform with separate modules for customers, service providers, and admins.
- Developed core features including service booking, provider dispatch, admin dashboard, authentication, notifications, and role-based access control.
- Designed REST API architecture using proper separation of concerns with routes, controllers, services, and Prisma database models.
- Implemented JWT-based authentication, OTP verification flow, protected routes, and role-based authorization.
- Integrated real-time notification features using Socket.IO for booking and provider-related updates.
- Deployed frontend on Vercel and backend on Railway with PostgreSQL database hosted on Supabase.

PicFlow – Full-Stack Cloud Image Upload Feed

Tech Stack: Node.js, Express.js, React.js, MongoDB, Mongoose, Multer, ImageKit

- Developed a MERN-stack image upload application where users can upload images with captions and view them in a responsive feed.
- Implemented image upload handling using Multer buffers and streamed files directly to ImageKit cloud storage without saving files on the server disk.
- Added image post management features including create, read, update, and delete functionality.
- Structured the backend with separate database connection, storage service, route handling, and controller logic.

EDUCATION

Bachelor of Information Technology (BIT)

Central Campus of Technology, Nepal | 2022 – 2026 Expected | Current: 8th Semester

ADDITIONAL STRENGTHS

- Strong interest in backend development, API design, and database architecture.
- Comfortable using Git, GitHub, Postman, and deployment platforms.
- Able to understand, debug, and improve existing codebases.
- Responsible AI user: uses AI for learning, debugging, and productivity while focusing on understanding and improving code independently.
- Continuously improving knowledge of modern full-stack development practices.
